

## NETFLIX EDA

This is a power BI project in which we are doing Exploratory Data Analysis.  
Data is collected from Kaggle.com.

In this project I have created an interactive dashboard using the Power Bi Desktop version.

Through this project I have learned how to model the data. Learned various new dax measures and visualization tools which I never used before like a funnel chart.

I also learned how to clean data and validate and merge the data for EDA.

In this project I have created a dashboard through which anyone can filter and explore the data by him/herself.

Various new measures are also introduced in this project which you can see by yourself in pbix file.
